

Security Code Review

Security code review provides insight into the “real risk” associated with insecure code. When used together with automated tools and manual penetration testing, code review can significantly increase the cost effectiveness of an application security verification effort. Aurora combines automated and manual code analysis techniques in a multi-step process of familiarization, prioritization and analysis to understand the context and make a relevant risk estimate that accounts for both the likelihood of attack and the business impact of a breach.

How the process works:

- Identify and remediate code level vulnerabilities
- Conduct security due diligence of key applications and 3rd party software
- Meet regulatory requirements (PCI DSS 1.2, clause 6.3.7)
- Educate developers on secure coding best practices
- Enforces security as development priority

Key value propositions include:

- Minimize the risk and likelihood of a network breach
- Secure Code training for developers
- Increased cost effectiveness of application security

Ready To Get Started?

Contact us at 888-282-0696 or sales@aurorait.com to learn how Aurora Security Services can help you accomplish your specific business and IT security goals. Explore further by visiting our website at www.aurorait.com.

BUSINESS VALUE

- Cost-effective compliance
- Prioritized and simplified recommendations
- Achieve greater return on investment
- Optimized implementation
- Knowledge transfer

FEATURES & BENEFITS

- Review of network, coding, and application security
- Determine weaknesses and vulnerabilities with code analysis
- Achieve government mandated compliance requirements
